A is for Amplifier

An amplifier makes a signal bigger.

An amplifier has an input and an output. The input is a signal, like music from an electric guitar, and the output is the same signal with more power! The increase in power is called gain. Turn up the volume, turn up the gain!

B is for Battery

A battery gives power to electric circuits.

Batteries store energy when not in use. When they are connected to a closed electric circuit, they force electric charges to move—creating a current! Not all batteries look the same, but they all do the same thing to charges, so they are drawn with the same symbol in circuit diagrams.
